

# THIN FILM CHIP RESISTORS

RNC

RNC 05, 10, 16, 20, 32, 50, 57, 63

MEGASTAR-OHMS thin film resistors have excellent performance in linearity, current noise, and high frequency applications. Low temperature coefficients and tight tolerances are characteristics that are not available from thick film technology. They are ideal for advanced high-density applications.

## Construction

The resistors are constructed out of a high-grade ceramic body. Internal metal electrodes are added at each end and connected by a resistive layer. The resistive layer is adjusted to give the approximate required resistance and laser cutting of this resistive layer that achieves tolerance trims the value. The resistive layer is covered with a protective coat and printed with the resistance value. Finally the two external terminations (matte tin) are added.

## Scope

This specification describe RNC05 to RNC63 high precision -high stability chip resistors with lead-free terminations made by thin film process.

## Features

1. Halogen Free Epoxy
2. RoHS compliant
  - Products with lead free terminations meet RoHS requirements.
  - Pb-glass contained in electrodes, resistor element and glass are exempted by RoHS
3. Reducing environmentally hazardous waste
4. High component and equipment reliability
5. Saving of PCB space
6. None forbidden-materials used in products/production

## Applications

1. Converters
2. Printer equipment
4. Server board
5. Telecom
6. Consumer
