

Features:

- ♦ 5mm round standard t-1 3/4 package.
- ♦ Fast response time.
- High photo sensitivity.
- ♦ Small junction capacitance.
- ♦ The product itself will remain within RoHS compliant Version.

Descriptions:

- This is a high speed and high sensitive silicon NPN phototransistor in a standard Φ5mm package.
- ♦ Due to its clear epoxy, the device is matched to visible light and infrared radiation.

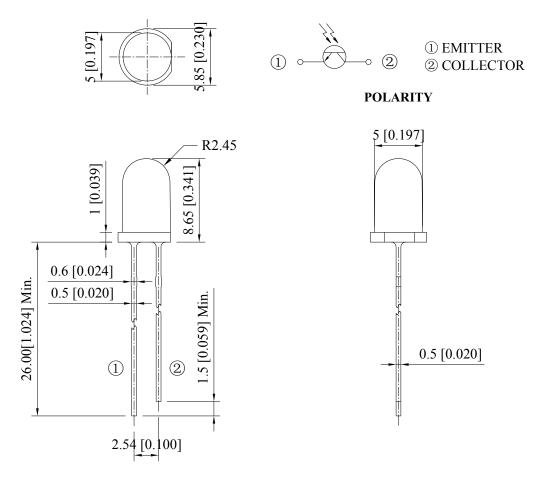

Applications:

- ♦ Infrared applied system.
- ♦ Optoelectronic automatic control system.
- ♦ Optoelectronic switch.
- ♦ Camera.
- Printer.
- Counters and sorters.
- ♦ Encoders.
- ♦ Floppy disk drive.
- Video camera, tape and card readers.
- Position sensors.

Package Dimension:

Part No.	Chip Material	Lens Color	Source Color
5-29-WC2D	Silicon	Water Clear	Phototransistor

Notes:

- 1. All dimensions are in millimeters (inches).
- 2. Tolerance is \pm 0.25 mm (.010") unless otherwise specified
- 3. Protruded resin under flange is 1.00 mm (.039") max.
- 4. Specifications are subject to change without notice.

Absolute Maximum Ratings at Ta=25 $^{\circ}$ C

Parameters	Symbol	Rating	Unit

Reliability Test Item And Condition:

The reliability of products shall be satisfied with items listed below:

Confidence level: 90%.

LTPD: 10%.

Please read the following notes before using the product:

1. Over-current-proof

Customer must apply resistors for protection, otherwise slight voltage shift will cause big current change (Burn out will happen).

2. Storage

- 2.1 Do not open moisture proof bag before the products are ready to use.
- 2.2 Before opening the package, the LEDs should be kept at 30° C or less and 80° RH or less.
- 2.3 The LEDs should be used within a year.
- 2.4 After opening the package, the LEDs should be kept at 30℃ or less and 60%RH or less.
- 2.5 The LEDs should be used within 168 hours (7 days) after opening the package.

3. Soldering Iron

Each terminal is to go to the tip of soldering iron temperature less than 260° C for 5 seconds within once in less than the soldering iron capacity 25W. Leave two seconds and more intervals, and do soldering of each terminal. Be careful because the damage of the product is often started at the time of the hand solder.

4. Soldering

When soldering, for Lamp without stopper type and must be leave a minimum of 3mm clearance from the base of the lens to the soldering point.

To avoided the Epoxy climb up on lead frame and was impact to non-soldering problem, dipping the lens into the solder must be avoided.

Do not apply any external stress to the lead frame during soldering while the LED is at high temperature.

Recommended soldering conditions:

Soldering Iron		Wave Soldering		
Temperature Soldering Time	300℃ Max. 3 sec. Max. (one time only)	Pre-heat Pre-heat Time Solder Wave Soldering Time	100℃ Max. 60 sec. Max. 260℃ Max. 5 sec. Max.	

Note: Excessive soldering temperature and / or time might result in deformation of the LED lens or catastrophic failure of the LED.

5. Repairing

Repair should not be done after the LEDs have been soldered. When repairing is unavoidable, a double-head soldering iron should be used (as below figure). It should be confirmed beforehand whether the characteristics of the LEDs will or will not be damaged by repairing.

6. Caution in ESD

Static Electricity and surge damages the LED. It is recommended to use a wrist band or anti-electrostatic glove when handling the LED. All devices equipment and machinery must be properly grounded.
